

**CHEMICAL ARRAYS ON A COMMON CARRIER**

5

**ABSTRACT**

10 A set of chemical arrays held together by a common carrier with one or more  
arrays of the set having been previously exposed to a sample. In one embodiment the  
common carrier optionally includes an indication of locations along which the carrier should  
be separated so as to separate the set of chemical arrays into multiple sub-sets each with one  
or more arrays. A method of use may include separating the set of chemical arrays into  
multiple sub-sets each with one or more arrays.
